

Abstract

The invention relates to a pressure limiting valve 10. The pressure limiting valve 10 comprises a valve holder 1, a valve insert 2 connected to the valve holder 1, a valve piston 3 slidably supported in the valve insert 2, and a compression spring 5 acting on the valve piston 3 in the closing direction. Between the valve piston 3 and the compression spring 5, an adjusting shim 4 is disposed such that the compression spring 5 is braced on one end on a bottom piece of the valve holder 1 and on the other on a face of the adjusting shim 4 facing away from the valve piston 3.
